

Clackamas, Clark, Multnomah, Washington County Cooperative Weed Management Area Weed List

Technical & Scientific Review Committee
Revised January 2018

Purpose

The plants on this list are species that threaten the health and vitality of native plant and animal communities, humans, and the economy. This list represents all non-native plant species that have been publically listed by Clackamas, Clark, Multnomah, Washington County Cooperative Weed Management Area (4CCWMA) MOU signatories. This list is intended to raise awareness about these species in our region. Most of these species have been documented within our CWMA boundary.

Rank Designations

The 4CCWMA Technical & Scientific Review Committee has assigned ranks to most of these species to help characterize their establishment and invasiveness within our CWMA boundary. Rank designations are subject to and in many cases likely to change based on additional knowledge and/or refinement of rank definitions. Rank designations were made based on professional opinion, but do not represent a formal, scientific risk assessment for our region. These ranks are not intended to reflect partner ranks.

Rank Definitions:

A = red alert, most invasive, still eradicable on a regional or local scale or limited spread

B = most invasive, locally abundant

C = most invasive, widespread

D = less aggressive, wildland invaders, less impact on natural systems

E = aggressive primarily in horticultural/agricultural situations; note: this category is incomplete

F = needs more info, should be noted if and where it's a problem

W = watch list

Needs investigation = has not yet been evaluated or not enough information is available to properly evaluate these species
